

**Illinois Power Agency Announces Selection of New Participants
for the Large Customer Self-direct Program and 2024-2025 Credit Amounts**

May 16, 2024

The Illinois Power Agency (“Agency”) has announced the approval of three applications for the 2024-2025 program year of the Large Customer Self-direct Renewable Portfolio Standard Compliance Program (“Self-direct Program”). The participants are:

- City of Chicago
- Loyola University
- State Farm Insurance

Applications were reviewed and selected based on the protocol outlined in Section 6.6.3 of the [2024 Long-Term Renewable Resources Procurement Plan](#). All three participants will have Renewable Energy Credits (“RECs”) supplied by the Double Black Diamond Solar Project. They join Goldframe, LLC (Meta) and Verizon who were [approved for participation](#) in the Self-direct Program in 2023.

In the Agency’s 2024 Long-Term Renewable Resources Procurement Plan, the Agency set a maximum program size of 4 million RECs for the 2024-2025 program year. The combined total of approved applications is approximately 1 million RECs.

Additionally, on May 16, 2024, the Illinois Commerce Commission approved the self-direct credit amount for the 2024-2025 program year. The self-direct credit amount is the reduction in volumetric Renewable Portfolio Standard charges collected pursuant to Section 16-108 of the Public Utilities Act for approved self-direct customers. Those credit amounts are \$0.000364/kWh in the ComEd service territory, and \$0.000279/kWh in the Ameren service territory. For more information on the determination of the credit amounts, see the Agency’s March 8, 2024 [compliance filing](#).
