

Illinois Solar for All

A state solar incentive program developed and implemented by the Illinois Power Agency, Illinois Solar for All (ILSFA) promotes greater access to solar energy (both on-site and community solar) and guarantees savings on electric bills and no upfront costs for income-eligible participants.

To participate in ILSFA, income-eligible residents and non-profits and public facilities in Illinois that meet eligibility requirements must work with solar companies that are vetted and approved by the Agency. The IPA protects consumer interests in the growing solar industry and empowers consumers to make well-informed decisions about going solar.
