Subject: [External] Ameresco Inc-Chapter 7 LTP Feedback

Below is our feedback on Chapter 7.

Topic 5

1. The ABP should not include the 10% domestic content adder in their pricing assumptions as current market conditions do not make it feasible to meet and would be unrealistic to include in the value of RECs at this time and make it harder for projects to be completed.
2. Illinois Solar for All should not include the low income bonus in the pricing model as this bonus has a limited capacity and is subject to selection criteria. Not all low income projects are going to be able to procure this bonus which would unfairly price the RECs.

Regards,
Kristin
